

A WORDS HAVE WEATHER STORY EBOOK

Mina's Last Jump

The boundary stayed when screen time ended

THE HOOK

One jump away

The game was one jump from saving when the timer chimed. Mina leaned closer. Her thumbs moved faster.

THE PRESSURE LINE

Off. Now.

"Off. Now. I won't ask again," Alex called from the kitchen. Mina held the tablet tighter.

POSSIBLE WORD-WEATHER

The room crackles

Orange word-weather crackled between them. Willo lifted one palm. "She may hear only the power, not the plan," Willo said.

KEEP THE BOUNDARY

Finished still means finished

Alex came closer and breathed once. The timer had rung. The tablet was still going away. The boundary stayed.

REPAIR

Two ways to close

"That sounded like a threat. Screen time is finished, and I know the jump mattered. Do you want to save it, or shall I?"

DISAPPOINTMENT CAN STAY

Save

Mina frowned. She pressed the save button, slowly, and held out the tablet.
"I still don't like it."

CARRY IT FORWARD

The next page

"You don't have to like it," Alex said. Mina chose her sketchbook. The room was quieter, not perfect - and the limit had not moved.

READ IT AGAIN

What was the choice?

Mina could not choose more screen time. She could choose how the game closed. A bounded choice is honest only when both options are acceptable to the adult.

TRY IT TOGETHER

Build a closing ritual

Choose one five-minute cue, one final action and one next activity before the next screen session. Practise the words when nobody is already upset.

WILLO WONDERS

Can clear also be kind?

Kind did not mean more time. Clear did not need a threat. Alex named the ending, acknowledged the hard part and offered one small piece of control.

Adult notes

Key message: keep the screen-time limit and make the transition predictable. Try: (1) design a three-step closing ritual; (2) role-play save-or-adult-saves; (3) draw a choice map showing what can and cannot change. For younger children, use a visual timer and one short sentence. For persistent conflict, review whether the timing, game save points and transition demand are realistic.
